

Experimental Classroom Course Development Funding Opportunity

The Center for Teaching and Learning is pleased to provide support of up to \$1500 for the development of new courses or significant revisions to existing courses that seek to make effective use of the experimental classroom. More information about the experimental classroom can be found here: <http://ctl.centre.edu/experimental-classroom.html>. CTL staff are also happy to provide more information.

We anticipate funding at least one experimental classroom course development proposal. All full-time employees of the college with faculty status are eligible to apply.

It is expected that funding recipients will (re)develop the course during the summer of 2018, and share their design and/or implementation experiences with colleagues through a short CTL newsletter submission. It is expected that courses that are developed with funds from CTL will be taught regularly.

To apply, please submit an application letter that includes: a description of the proposed course, including student learning outcomes and how it fits into a curriculum; a statement of how the intended pedagogical approaches will make effective use of the experimental classroom; and an itemized budget.

Applicants may request a stipend of up to \$1000 and funds for materials of up to \$500. Eligible material expenses include books, workshop registration fees, travel costs, and other expenses directly related to the development of the course. The stipend may be used to cover additional material costs, conference travel, or other expenses incurred beyond \$500. Requests for funds to provide student stipends will not be considered. Funds should be spent by June 22, 2018.

Please submit all materials via email to the Center for Teaching and Learning (ctl@centre.edu) by Monday, April 2.

All applications will be reviewed by the CTL Advisory Board.
