

Solstice Wireless presentation

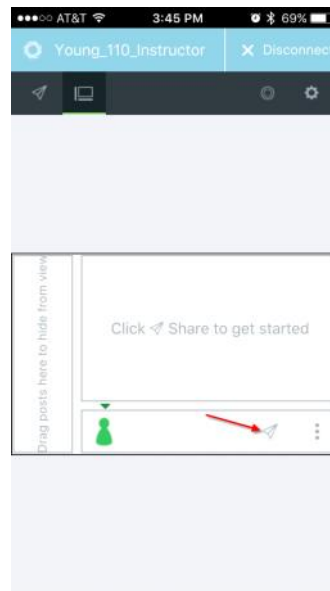

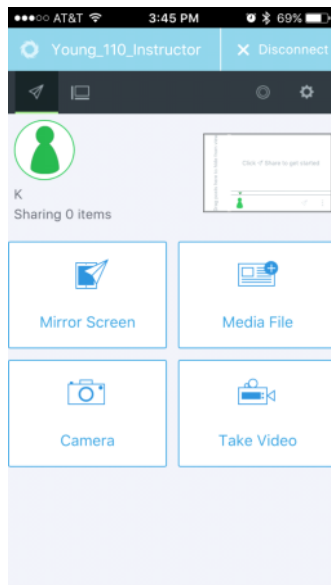

The Experimental Classroom is designed to allow wireless presentation using Solstice pods and software. Solstice Pods are wireless presentation devices that allow unlimited users in the room to connect to the device and share content or their screen (works on all devices).

To project to the Solstice Wireless Presentation pods using a mobile device or laptop:

1. You must first download the Solstice App to connect. The app is available for Mac/PC, iOS/Android devices.
 - a. USB keys with the Solstice app installer are in the cabinet.
2. Once the app is installed, connect to the Solstice using the IP address displayed.
3. Enter the 4-digit code displayed on the screen to complete the connection.
4. From here you can select content from your device to display on the screen.
 - a. Laptops have the ability to share the entire screen, a window, or specific content.
 - b. Mobile devices have the ability to share existing pictures or media, or take a picture or video to. Airplay is available, but does not always work. You are free to try to connect this way.

Below are screenshots of what it looks like from an iPhone:
